

APRIL 2025

**52501/125C1A/
141C1A/120C1A/
127C1A/126C1A**

Time : Three hours

Maximum : 75 marks

PART A — ($10 \times 2 = 20$ marks)

Answer any TEN questions.

1. Define Algorithm.
2. How to formatting the string in Python?
3. Recall Identifiers.
4. What is the usage of Boolean expression?
5. List out the membership operator in Python.
6. Compare definite loops and indefinite loops.
7. Define functions.
8. Discuss about variable scope.
9. How to importing the modules in Python?
10. Interpret on Object references.
11. What is dictionary?
12. List the usage of Polymorphism.

PART B — ($5 \times 5 = 25$ marks)

Answer any FIVE questions.

13. Write a Python program to calculate the sum of three given numbers. If the values are equal, return three times their sum.
14. Explain the essence of computational problem solving.
15. Describe about selection control statements in Python with an example.
16. Write about recursive functions in python.
17. Discuss about exception handling and user input.
18. Illustrate set data type in Python with an example.
19. Categorize the fundamental features of object oriented programming.

PART C — ($3 \times 10 = 30$ marks)

Answer any THREE questions.

20. Illustrate the expression and data types used in Python with an example.
 21. Explain the manipulation building blocks of Python programming.
 22. Write in detail about calling value and returning functions in python.
 23. Construct the Python program to open, read and write the content in a text file.
 24. Define Inheritance. How to defining the subclass in Python with an example?
